

## Position statement on the prescribing for mild, infrequent migraines in adults

Following the NHS England guidance 'Conditions for which over the counter items should not routinely be prescribed in primary care: Guidance for CCGs' (March 2018) the following changes to prescribing have been agreed across Barking and Dagenham, Havering and Redbridge.

**From 16 March 2021**  
**Barking and Dagenham, Havering and Redbridge Clinical Commissioning Groups (BHR CCGS) no longer supports the prescribing of treatment for mild, infrequent migraines in adults**

### Decision

The decision to stop treatment for mild, infrequent migraines applies to ALL adult patients across Barking and Dagenham, Havering and Redbridge unless the patient fall into one of the exceptions listed below.

Please note that this does not affect treatment for **chronic, frequent (more than once a month) or severe migraines**.

If symptoms are not improving or responding to treatment, then patients should be encouraged to seek further advice from a pharmacy, NHS app, NHS website or NHS 111. For care home patients: access to treatment should be considered via a care home policy.

### Exception

BHR CCGs have agreed an exception to this recommendation, where they accept that prescribing should continue in primary care for:

- The clinician considers that the patient's ability to self-manage is compromised as a consequence of significant vulnerability to the extent that their health and/or wellbeing could be adversely affected, if reliant on self-care. Consideration should also be given to safeguarding issues

### This decision was made because:

- Migraine is a common health condition, affecting around one in every 5 women and around one in every 15 men. Mild, infrequent migraines can be adequately treated with over the counter pain killers and a number of combination medicines for migraine are available that contain both painkillers and anti-sickness medicines
- BHR CCGs have a duty to spend taxpayer's money wisely, to make sure they get the best value possible – especially when NHS funding is being severely squeezed and more patients are being seen with more complex health issues than ever before
